

Bunge North American

**751 E. Farming St.
Marion, OH 43302**

Bunge NA chose concrete pavement for their busy soybean terminal facility in Marion. The Bunge NA plant manager is pleased to have a new maintenance free concrete roadway to support the heavy duty truck traffic, which at times handles 300 semis per day. Obviously, they can not afford any interruptions to their operations.

Owner:

Bunge NA

Contractor:

Yoder Concrete Construction LLC

R/M Supplier:

Hensel Ready Mix, Inc.

Yoder Concrete completed the asphalt pavement removal, including several old foundations, and the concrete placement in three days. The existing asphalt pavement was removed and replaced with an 8 inch thick concrete steel reinforced drive. The existing stone base was re-compacted in place.

Hensel Ready Mix, Inc. furnished the 4500 PSI AE concrete that was opened to semi traffic following a seven day curing period.

The steel bar reinforced concrete pavement was competitive with a lesser design of 8 inch thick asphalt and it should last twice as long.
